

# ADVANTAGE MRI DOES DTI

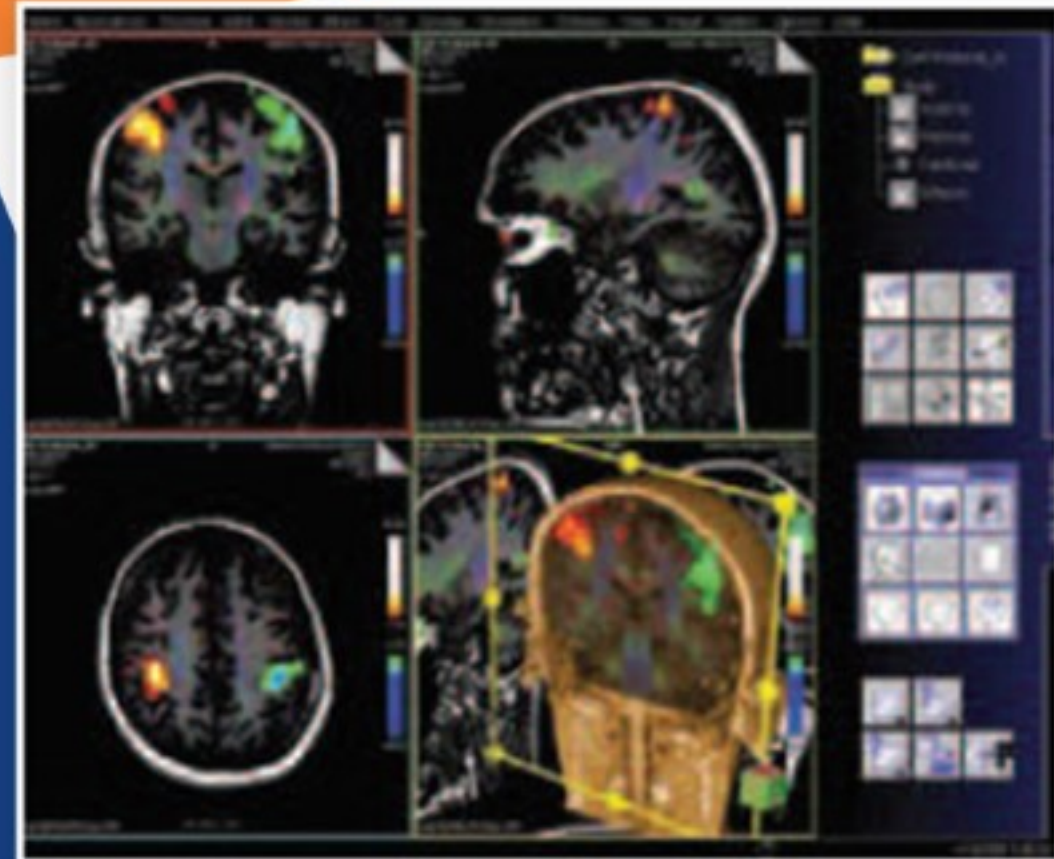

Advantage MRI is pleased to announce we are now offering DTI (Diffusion Tensor Imaging) which is used to detect diffuse axonal injury and traumatic brain injury (TBI) which are not visible on standard MRI brain scans. Initially, these studies will only be performed in the evaluation of personal injury patients.

Advantage MRI will be performing these scans at our Sacramento location on 800 Howe Avenue. Our Siemens Espree equipment boasts excellent image quality with short bore technology designed for patient ease and comfort.

When scheduling a patient for a DTI study, make sure to notate that on the prescription.

As always, we can be reached at 916-929-2178.
